MILLER REMOVAL TOOL #10322

RETAIN ALL FASTENERS FOR REINSTALLATION
WARNING:
To avoid serious or fatal injury on vehicles equipped with airbags, disable the Supplemental Restraint System (SRS) before attempting any steering wheel, steering column, airbag, seat belt tensioner, impact sensor or instrument panel component diagnosis or service. Disconnect and isolate the battery negative (ground) cable, then wait two minutes for the system capacitor to discharge before performing further diagnosis or service. This is the only sure way to disable the SRS. Failure to take the proper precautions could result in accidental airbag deployment.

WARNING:
To avoid serious or fatal injury when removing a deployed airbag, rubber gloves, eye protection, and a long-sleeved shirt should be worn. There may be deposits on the airbag cushion and other interior surfaces. In large doses, these deposits may cause irritation to the skin and eyes.

1. Disconnect and isolate the negative cable from the battery. Wait two minutes for the system capacitor to discharge before further service.

2. From below the instrument panel, remove the two screws that secure the steering column opening cover and Knee AirBag (KAB) unit to the instrument panel lower reinforcement.

3. Pull the cover and KAB down and back from the instrument panel far enough to access the electrical connection that is secured by integral latches to the KAB inflator initiator connector receptacle on the outboard end of the KAB housing.

4. Depress the latches on each side of the connector insulator and pull the insulator straight out from the inflator initiator to disconnect it from the connector receptacle.

5. Remove the steering column opening cover and KAB from the vehicle as a unit.

REFER TO END OF LINE (EOL) TEST PROCEDURE ON THE FOLLOWING PAGES
Mopar Connect – End Of Line (EOL) Procedure

To be performed by the installer

The EOL procedure will verify proper function/installation of the Mopar Connect Module and Installation Kit in the vehicle.

Equipment Needed To Perform This Procedure:
• Laptop or PC with internet access
• Smart phone

NOTE: Some screens and commands may be different based on the smartphone operating system. For example, some smartphone operating systems require that you press “login” or “enter” to continue. If assistance is needed, please call Autonet Mobile Customer Care Center at 1-855-75MOPAR.

Questions regarding this procedure should be directed to Autonet Mobile Customer Care Center at 1 -855-75MOPAR

Testing the Mopar Connect Module After Installation In The Vehicle

1. Ensure that all doors have been closed on the vehicle for at least 3 minutes. Have all doors been closed on the vehicle for at least 3 minutes?
   
   a) **No**, go to Step 2.
   b) **Yes**, go to Step 3.

2. Close all doors and wait 3 minutes before continuing to Step 3.

3. Open driver’s door and turn ignition switch to RUN position within 15 seconds of opening the driver’s door. If this is not completed within 15 seconds, go back to Step 2, otherwise, continue to next step.

4. Leave the ignition key in the RUN position for up to 3 minutes while the Mopar Connect module reads the VIN of the vehicle and re-writes the Network Name (SSID) that will be used in the next step.

5. After 3 minutes have elapsed, open the wireless network list on the smart phone, laptop, or PC. Look for a Network Name (SSID) that either says “mopar-XXXX” (where XXXX are the last 4 digits as the vehicle’s VIN) or “autonet-NNNN” (where NNNN are the last 4 digits of the Mopar Connect Module’s serial number). The serial number can also be found on the Activation Card that will be given to the customer.

   a) If “autonet-NNNN” appears in the network list, continue to step 6.
   b) If “mopar-XXXX” appears in the network list, connect to that network and continue to Step 7.

Mopar Connect – End Of Line (EOL) Procedure (continued)

7. Open the web browser on the device (smartphone, laptop or PC) and go to:
   http://www.autonetrouter.com/eol

   **NOTE:** Some screens and commands may be different based on the smartphone operating system. For example, some smartphone operating systems require that you press “login” or “enter” to continue. If assistance is needed, please call Autonet Mobile Customer Care Center at 1-855-75MOPAR.

If the following screen appears after opening the browser on the device or the browser redirects you to this screen:

Do not press Login, rather, in the URL Address Bar of the browser, type
   http://www.autonetrouter.com/eol
   and press Enter.

   **NOTE:** Some screens and commands may be different based on the smartphone operating system. For example, some smartphone operating systems require that you press “login” or “enter” to continue. If assistance is needed, please call Autonet Mobile Customer Care Center at 1-855-75MOPAR.

If the following screen appears while trying to access the URL above, go back to Step 5 and start over, otherwise, continue to the next Step.
Mopar Connect – End Of Line (EOL) Procedure (continued)

8. Successful access to http://www.autonetrouter.com/eol
   will display the following screen: (VIN may or may not be present)

   ![Helio EOL Test Screen]

9. The EOL test consists of two parts:

   a) Verification of proper connection of the Mopar Connect module to the vehicle’s CAN bus as indicated by the displaying of the vehicle’s VIN on the browser screen.
   b) Verification of communication via network/WiFi as indicated by the Pass/Fail message in the center of the screen when the EOL test is executed from the browser screen.

For proper function of the Mopar Connect module, both parts (9a and 9b) of the EOL test must pass.

10. Click on the button “Run EOL test”

11. If both parts of the EOL test passes, the following will be displayed:

   ![Pass Message Screen]
Mopar Connect – End Of Line (EOL) Procedure (continued)

If both parts of the EOL test pass, then EOL testing is complete. Otherwise, continue to Step 12.

12. If one or both parts of the EOL test fail, any of the following screens can be displayed:

**NOTE:** It is possible to fail one part and pass the other. For example, a green color Pass indicator on the center of the browser screen, but VIN missing on the browser screen does not signify a successful pass of the EOL test. See example below.

- A missing VIN indicates that the Mopar Connect is not properly connected to the vehicle's CAN bus.
- A red color Fail status displayed indicates that the network/WiFi portion of the EOL test failed.
Mopar Connect – End Of Line (EOL) Procedure (continued)

For all other errors or for further assistance, contact the Autonet Mobile Customer Care Center at
